Skills

Technical Product management Product development Leadership Product Strategy Roadmap Agile Methodologies Product Ownership Data Analysis in Excel APIs

Experience

Thermax Ltd Pune, India SME/Product Pune and Pun

- Played a key role as a Subject Matter Expert (SME), leading internal software team in the development of cutting-edge IIoT products.
- Successfully delivered new product features that resulted in a 50% YoY increase in the number of customers, driving significant business growth and market expansion.
- Led [0 to 1] development of innovative digital twin functionality, that helps customer operate their energy-asset at optimum efficiency A unique selling proposition for the product.
- Revamping of the execution process through the implementation of Standard Operating Procedures (SOPs), resulting in a 75% reduction in new user-asset onboarding time, improving overall team efficiency and productivity of execution.
- Oversaw the execution of projects, ensuring efficient and timely delivery of solutions to clients, while maintaining high-quality standards and customer satisfaction.

Additional Product Ownership Initiatives / Responsibility:

- Launched varous new product features using agile methology and laid roadmap for development of a new offering (IIoT product for industrial thermal oil heaters).
- Composed technical requirements from understandings of user stories and feedback collected by interal operation teams which led to new product features.
- Documentation of product requirements, technical specifications, SOPs for executions and related knowledge.
- Collaborated with buissiness stake holders to ensure product alignment with buissiness requirements.

Secured: Best proof of concept award (2021—22) for "digital twin of grate fired boiler and advanced control of boiler using digital twin technology".

- This is a digital model of customer's industrial boiler asset dynamically trained using it's IoT data so as to automatically generate operational recommendation for optimal operation of asset.
- This model comprises multiple machine learning models working together to simulate a real system.

Energy and Emission Laboraties

Technical Lead

Chennai, India Jun '19 – Dec '20

- Led [0 to 1] development of prototype: "Particulate matter level measurement sensor for industrial flue gas stacks"
- Helped client meet compliance particulate emmission level of 30 units from 100 units.
- Established test set up for benchmarking instrument accuracy and precision.
- Defined technical specifications for the components required to build the product, in accordance with the business requirements.
- Developed a product roadmap that aligns with overall business objectives, as well as defining key milestones and deliverables.

Education

Indian Institute of Technology, Madras

Chennai, India 2015 – 2019

Bachelorś degree in Mechanical Engineering

key courses: Data Science, Design and Optimisation of Energy Systems

leadership Roles:

Coordinator of Mechanica 2k18

— Increased the number of participants by 30% compared to last year. Responsible for organizing and conducting events managing about 100 Participants.

Internship @ Daimler

- Worked at a Diesel Engine Durability Test Setup to study various energy flows and losses.
- Built dashboards in Power BI using data from sensors to display key performance indicators related to energy management, improving visibility and enabling data-driven decision making.
